## **Scape Technologies is moving to a new location in Odense**

**Scape Technologies has grown out of its current office at Kochsgade 31C and moves to the Østerbro District in Odense. The Østerbro District has gone through a major renewal of the area and become a coveted area for both homes and businesses.**

The demand for Scape Technologies' Bin-Picking Solutions has steadily increased over the years and during last year Scape has had several significant breakthroughs, with orders from large international customers. It confirms our strength and position in a demanding industry such as Automotive and welding. At the same time, Scape's growth strategy has proven successful by scaling the business through a growing sales channel of business partners. Due to the intake of new customers and partners, the number of employees has doubled over the last year.

### **More than twice as much space**

To meet the growing demand and to continue to honour the considerable growth opportunities, Scape needs more space, and this we will get in the new premises at Østerbro District. The new address will have more than twice as much space as Scape has today. The premises are built up around an old cable drum factory, which has now been completely modernized. The premises include both offices, showroom and storage facilities.

"It has been a pleasure to stay at Kochsgade 31C, but we have to admit that there is no longer enough space for us. At the new address, - we will have modern facilities under one roof that matches our needs, and at the same time, it is centrally located in the city centre of Odense. We will continue to have parking spaces right outside the door, and this has been an important part in finding a new place to stay", says John Espensen, Marketing Manager at Scape Technologies.

The site for Scape Technologies' new headquarters was found in collaboration with Colliers Odense, who has an in-depth insight of market movements, trends and networks within the industry such as property developers, architects and property owners.

The new headquarter is developed in collaboration with the landlord and Creo Architects, who have assisted with interior design suggestions. The aim has been to hit a modern Scandinavian décor with raw details such as large window sections and high ceilings combined with glass, concrete and wooden cladding.

## November 1<sup>st</sup> - Scape Technologies moves

We look forward to welcoming business associates, partners and new as well as old customers in our new premises after November 1<sup>st</sup>, 2019.

## About Scape Technologies

Scape Technologies is a focused robot technology company that has developed a unique Bin-Picking Solution – SCAPE Bin-Picker – which is sold to manufacturing companies.

The company develops and delivers an advanced robotic random bin-picking solution that integrates gripping devices, sensors, cameras and proprietary software for a fast, reliable and accurate collection, control and placement of sub-components and items that are supplied unstructured in boxes – hence the concept of Bin-Picking.

The SCAPE name is an abbreviation of "*Smart Classifier and Pose Estimation*", which is used in the company's advanced bin-picking solution.

The company's solution is targeted at the automation market in a variety of industries and applications, where items need to be collected from pallets before the next process, such as assembly of semi-finished products, part delivery for machines, quality control and packing.

Scape Technologies A/S is listed on the [Nasdaq First North Growth Market](#).
